$\qquad$

Use this sheet to help you find the altitude of your rocket. Follow the directions below:

1. Get at least 5 different angles from your fellow students. $\qquad$
$\qquad$
$\qquad$
$\qquad$
$+$ $\qquad$
Total $\qquad$
2. Divide the angle total, by 5 . $\qquad$ $) \div 5=$ $\qquad$ Average Angle
3. Now go to the chart and find the tangent of your average angle. $\qquad$
4. Take the tangent of your average angle, and multiply it by 30 (meters).
$\qquad$ ) $\mathrm{X} 30=$ $\qquad$ altitude in meters
5. Convert meters to feet:
 ) $\times 3.28=$ $\qquad$ altitude in feet.
6. Final Altitude: $\qquad$ feet
